                                                     The present sequence is one of a number of isolated polynucleotides which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors and can be used for determining differences in the olfactory faculties
Sequence
                                          different individuals.
                                                                                                                                                                                                                                                                                                                                                                                                           polynucleotides which encode polypeptides involved in olfactory sation for identifying olfactory agonists and antagonists -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2001-290713/30

```

The invention relates to nucleic acids encoding human olfactory receptors, OR, (a G protein-coupled receptor, GPCR). The OR's specifically recognise molecules, odourants, that elicit specific olfactory sensation. The human olfactory receptors and polynucleotides encoding them are useful for screening a library of chemical compounds for compounds that are involved in olfactory sensation. Modulators of their activity are useful for pharmacological and genetic modulation of

                                                                                                                                                                                     The present sequence is one of a number of isolated polynucleotides which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent ingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties of different individuals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         scent profile;

                                                                                                                                                                                                                                                                                                                                                                                          transmembrane domains (TMD) II-VI, III-VI, IÎ-VII or III-VII. Chimeric nucleic acids encoding a 7-TMD protein comprise a sequence encoding an N-terminal plasma membrane translocation domain (especially the sequence shown in AAY96658), a first TMD and the OR-LBR. The translocation domain was initially derived from the N-terminus of the human rhodopsin receptor. LBR produced by amplification with the primers are useful for generating new odorants, to screen for toxicity or therapeutic activity in odorants, and altering an animal's olfactory response (claimed).

                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel human G-coupled receptor (I). (I) and its corresponding polynucleotides are useful for diagnosing, treating or preventing cell proliferative diseases (e.g. lymphoma, leukaemia, breas cancer or cirrhosis), neurological disorders (e.g. stroke, Alzhelmer's disease, multiple sclerosis or mental retardation), cardiovascular diseases (e.g. atherosclerosis, angina pectoris or congestive heart failure), gastrointestinal disorders (e.g. dysphagia, indigestion or gastritis), autoimmune/inflammatory disorders (e.g. AIDS, Crohn's disease rystemic lupus erythematosus) or metabolic disorders (e.g. disbetes or obesity), or viral infections (e.g. infection by herpesvirus or parvoyirus). ABK16615-ABK16637 represent novel human G-coupled

Chimeric nucleic acids encoding a 7-TMD protein comprise a sequence encoding an N-terminal plasma membrane translocation domain (especially the sequence shown in AAY96658), a first TMD and the OR-LBR. The translocation domain was initially derived from the N-terminus of the human rhodopsin receptor. LBR produced by amplification with the primers are useful for generating new odorants, to screen for toxicity or therapeutic activity in odorants, and altering an animal's olfactory response (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 669 BP; 122 A; 202 C; 150 G; 195

Homo sapiens, Similar to olfactory receptor,
member 4, clone IMAGE:4424116, mRNA.
BC016940
Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 27 Row: 1 Column: 22
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, GenomeScan gene prediction, Similarity but not identity to protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Similarity
                                                                                                                                                                                                                                                Submitted (05-NOV-2001) National Institutes of Health, Mammalian Submitted (05-NOV-2001) National Institutes of Health, Mammalian Gene Collection (MGC), Cancer Genomics Office, National Cancer Gene Collection (MGC), Cancer Genomics Office, National Cancer Institute, 31 Center Drive, Room 11A03, Bethesda, MD 20892-2590,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               inserts
            10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                               (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Biomedical Polymers Research
